

p5.js

An accessible and lightweight graphics library

Introduction

- <https://p5js.org/>
- Free and open source library adding drawing functionality to a web page
- Designed with a simple, but flexible API
- Includes support for 2D, 3D, text, input, video, and sound

<https://p5js.org/examples/form-pie-chart.html>

<https://p5js.org/examples/3d-multiple-lights.html>

<https://p5js.org/examples/image-pointillism.html>

Setup

- Editor available online: <https://editor.p5js.org/>
 - Node package available to integrate into other apps
- `setup()` function is called once to initialize
- `createCanvas(400, 400)` creates a 400 by 400 pixel area to draw on
- `draw()` function is called repeatedly to create the scene
 - All drawing related code should go here

```
1 function setup() {  
2   createCanvas(400, 400);  
3 }  
4  
5 function draw() {  
6   background(220);  
7 }
```

2D Drawing

- Several types of shapes can be drawn with a single function call
 - rect(), circle(), line(), arc(), ellipse(), etc.
- First two arguments are the x,y position
- Width and height, radius, or second x,y position come afterwards
- fill() function defines the RGB colour to use for the interior of the shape
- stroke() function defines the RGB colour for the border of the shape

```
1 function setup() {  
2   createCanvas(400, 400);  
3 }  
4  
5 function draw() {  
6   background(220);  
7   stroke(0, 0, 0)  
8  
9   // Rectangle  
10  fill(255, 100, 0)  
11  rect(20, 20, 60, 40)  
12  
13  // Circle  
14  fill(0, 200, 50)  
15  circle(150, 40, 50)  
16  
17  // Line  
18  stroke(0, 0, 255)  
19  line(40, 80, 210, 100)  
20 }
```

Keyboard Input

- The keyPressed() and keyReleased() functions can be used to detect keyboard input
- The keyCode variable holds the key which triggered the event
- A square was created for this example, which moves with the arrow keys
- keysDown() can also be used in the draw function

```
1 function setup() {  
2   createCanvas(400, 400);  
3   this.x = 200  
4   this.y = 200  
5   this.xvel = 0  
6   this.yvel = 0  
7 }  
8  
9 function draw() {  
10  background(220);  
11  fill(0, 255, 0)  
12  this.x += this.xvel * 2  
13  this.y += this.yvel * 2  
14  rect(this.x - 20, this.y - 20, 40, 40)  
15 }  
16  
17 function keyPressed() {  
18   if (keyCode == UP_ARROW) {  
19     this.yvel = -1  
20   } else if (keyCode == DOWN_ARROW) {  
21     this.yvel = 1  
22   } else if (keyCode == LEFT_ARROW) {  
23     this.xvel = -1  
24   } else if (keyCode == RIGHT_ARROW) {  
25     this.xvel = 1  
26   }  
27 }  
28  
29 function keyReleased() {  
30   if (keyCode == UP_ARROW || keyCode == DOWN_ARROW) {  
31     this.yvel = 0  
32   } else if (keyCode == LEFT_ARROW || keyCode == RIGHT_ARROW) {  
33     this.xvel = 0  
34   }  
35 }
```

Vue Integration

- A few more steps required
 - `npm install --save p5` ← Command line
 - `import p5 from "p5";` ← Vue component
- Create sketch object containing desired built-in p5 functions which will be automatically called
 - The p5 context is passed into the lambda
- All p5 functions are now part of the s object rather than in global scope
- p5Context variable can be stored within the Vue page

```
1  const sketch = (s) => {  
2    s.setup = () => {  
3      // ...  
4    }  
5  
6    s.draw = () => {  
7      // ...  
8    }  
9  }
```

```
const p5Context = new p5(sketch);
```

A 10x10 grid with the following squares filled:

- Red squares: (0,0), (0,1), (0,2), (0,3), (0,4), (0,5), (0,6), (0,7), (0,8), (0,9), (1,0), (1,1), (1,2), (1,3), (1,4), (1,5), (1,6), (1,7), (1,8), (1,9), (2,0), (2,1), (2,2), (2,3), (2,4), (2,5), (2,6), (2,7), (2,8), (2,9), (3,0), (3,1), (3,2), (3,3), (3,4), (3,5), (3,6), (3,7), (3,8), (3,9), (4,0), (4,1), (4,2), (4,3), (4,4), (4,5), (4,6), (4,7), (4,8), (4,9), (5,0), (5,1), (5,2), (5,3), (5,4), (5,5), (5,6), (5,7), (5,8), (5,9), (6,0), (6,1), (6,2), (6,3), (6,4), (6,5), (6,6), (6,7), (6,8), (6,9), (7,0), (7,1), (7,2), (7,3), (7,4), (7,5), (7,6), (7,7), (7,8), (7,9), (8,0), (8,1), (8,2), (8,3), (8,4), (8,5), (8,6), (8,7), (8,8), (8,9), (9,0), (9,1), (9,2), (9,3), (9,4), (9,5), (9,6), (9,7), (9,8), (9,9).
- Green squares: (1,6), (2,9), (3,8), (4,7), (5,6), (6,5), (7,4), (8,3), (9,2), (9,1), (9,0).

- The following games all use the techniques specified in the last slide to integrate with Vue:
 - Snake
 - Word Search
 - Stacker
- The code is present in the following files:
 - src/components/SnakeGame.vue
 - src/components/WordSearchGame.vue
 - src/components/StackerGame.vue
- All game-related code is contained within a class for better organization
